First you must know that

1: There Are Things To Do: To keep your Facebook account safe and secure

2: There Are Things To Setup: In Other To Keep Your Facebook Account Safe and secure

Pay attention as we discuss these two smart ways to secure a Facebook account in details, is simply that a child of 13 years old can implement

Things To Do, To Keep Your Facebook Account Safe And Secure

1: Don't Accept All Friends Request:

When someone sends you a Facebook friend request, don't just rush and accept them; First take your time to go through the person timeline, view his or her profile and try to know if you are familiar with the person or best if the person's account speaks value to you

Because when yo fail to make your Facebook account safe, ***this is what happens when someone or group of people hack your Facebook accounts***

- They may sell it
- They may use the information on your account against you
- They may use it for fraud

Thousands to millions of Facebook account has been hacked, many people end up not being able to recover their hacked account, this is never a good experience

So remember not accepting all friend request can keep your Facebook account more secured, it is important that you keep your Facebook account secure and safe, for your own good, your reputation and for keeping your Facebook friends and followers, safe from fraudsters

2: Use a strong password and protect your password:

When you are creating a Facebook account try to use a **strong password**

A strong password is a password that contains both alphabet, numbers, upper case, lower case and special characters for example **xYz09_eT73.?** Also SEE Image Below

Change password

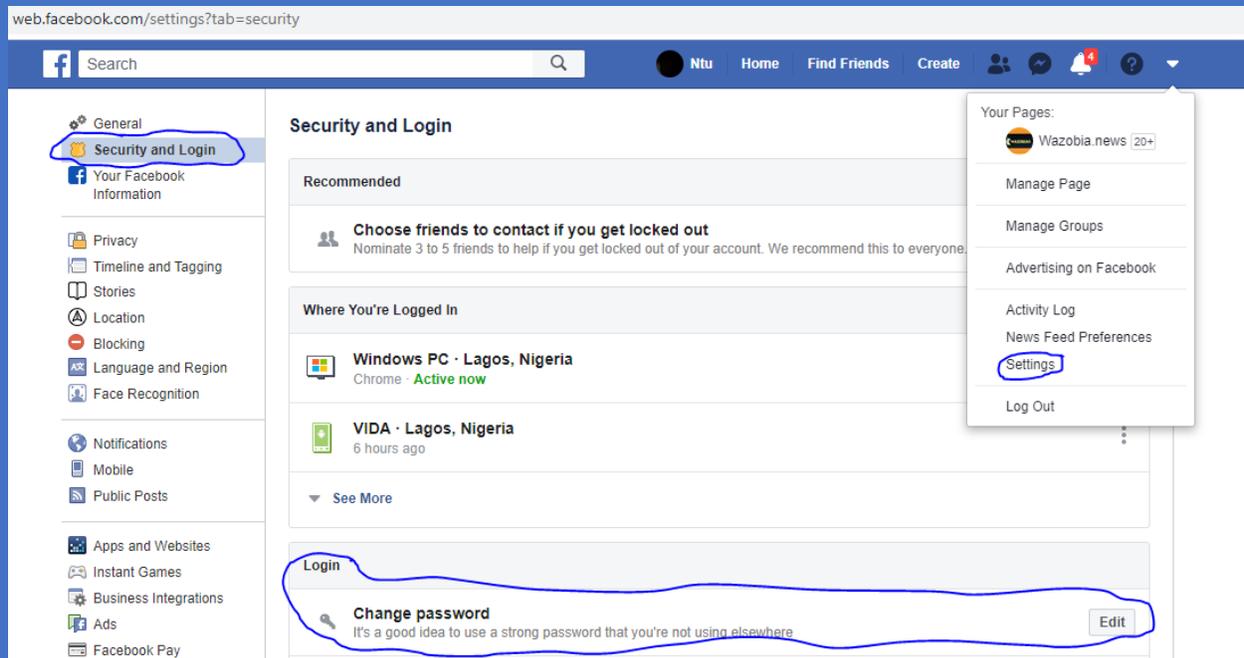

Please note that when changing your password, we ask you to set yourself a secure password that contains both uppercase and lowercase letters as well as numbers. This is for your own safety.

Current password	<input type="password"/>	PASSWORD:
New password	<input type="password"/>	 1292014
Confirm password	<input type="password"/>	 wH01292014etV

Change password

You can even choose to add special characters like **space** in your password. Your Facebook account must have a strong password, its important to keep the hackers off from easily hacking your Facebook Account

you can proceed to your **Facebook account settings** and update your Facebook account login password to stronger password, using Upper case, Lower Case and special character.. See picture below

When you have updated your Facebook password to a stronger password don't just login into Facebook anywhere else online or from any other devices aside from your (personal) mobile or computer devices

*Never you share information about your **Facebook login** details to other people irrespective of who they are*

Don't include **your name**, **your mobile number** or any other common words on your Facebook passwords

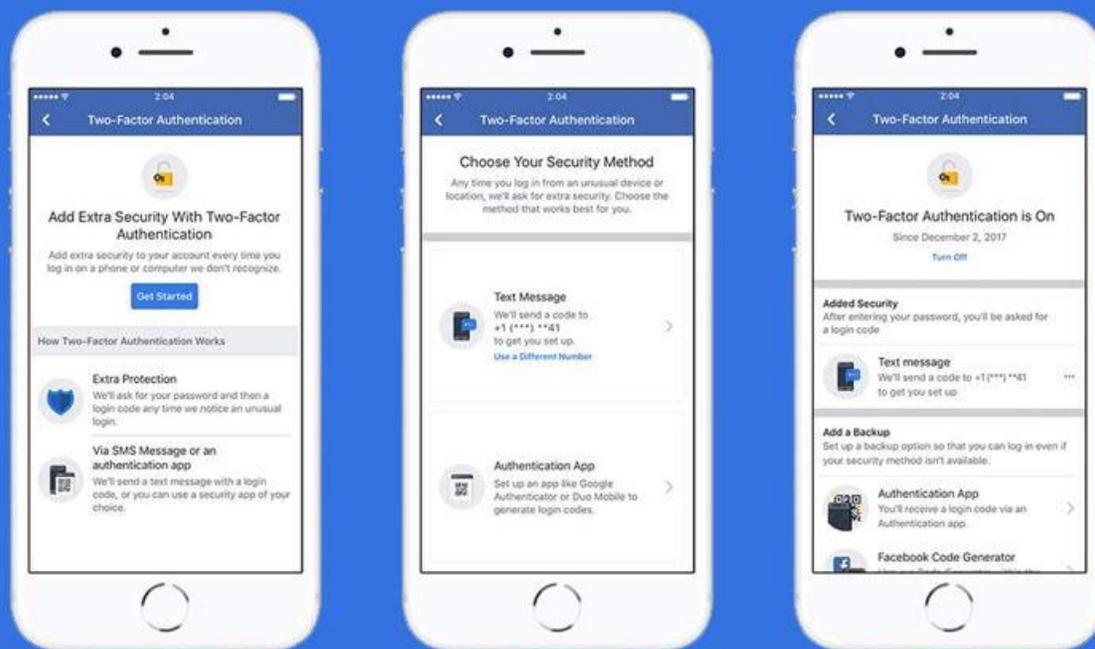

When you use other people's mobile phones or computer to access your Facebook account, kindly log out from Facebook from such devices as soon as you are done accessing Facebook

Things To Setup In Order To Keep Your Facebook Account Safe and secure

1: Setup two factors authentication

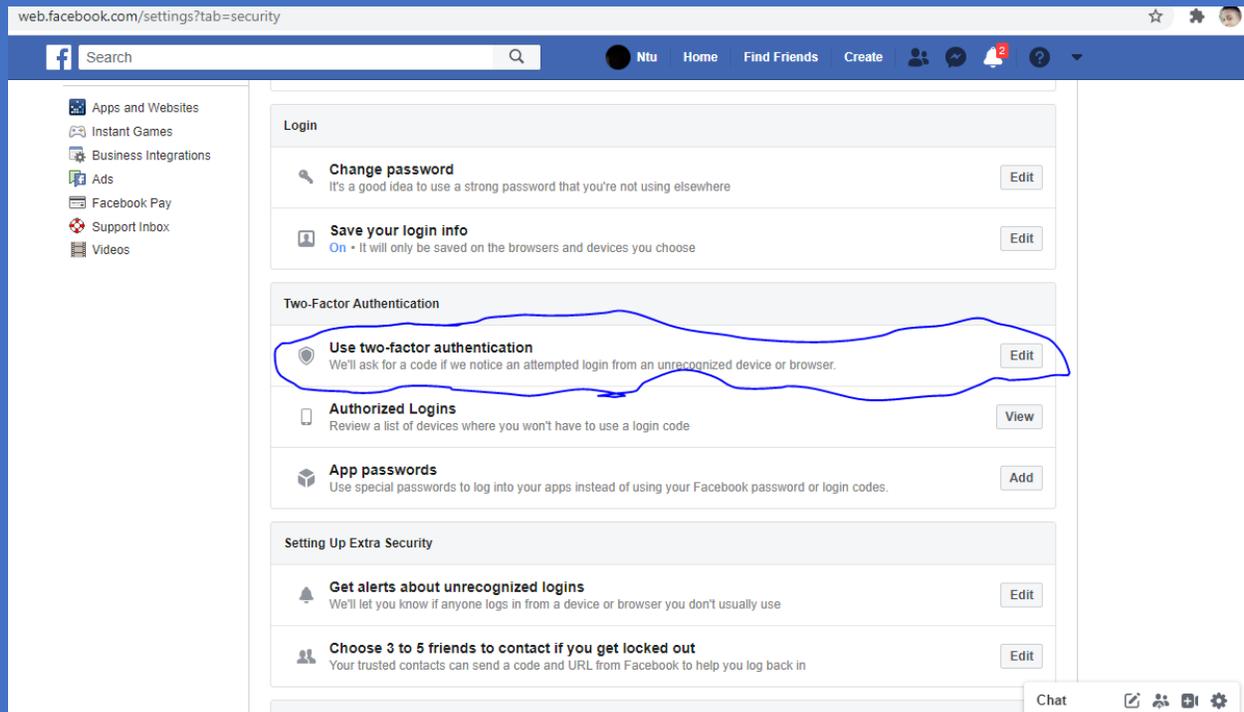

What is two-factor authentication and how does it work on

Two-factor authentication is a security feature that helps protect your Facebook account in addition to your password.

If you set up two-factor authentication, you'll be asked to enter a special login code or confirm your login attempt each time someone tries accessing Facebook from a browser or mobile device Facebook doesn't recognize associated message with your FB account.

To do that, you have to navigate to your [Facebook account setting](#) , click on [Security and Login](#) scroll down to two Facebook Two-Factor Authentication, *SEE IMAGE Below*

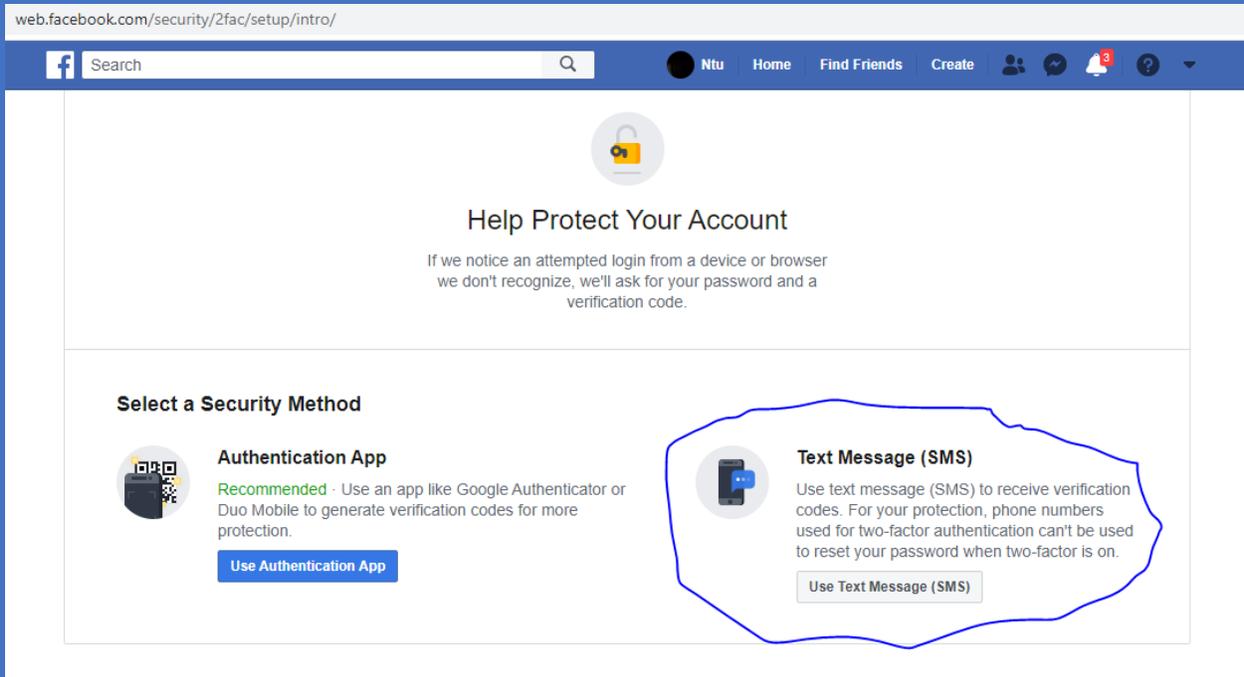

When you set up two-factor authentication on Facebook, you'll be asked to choose one of two security methods: Namely

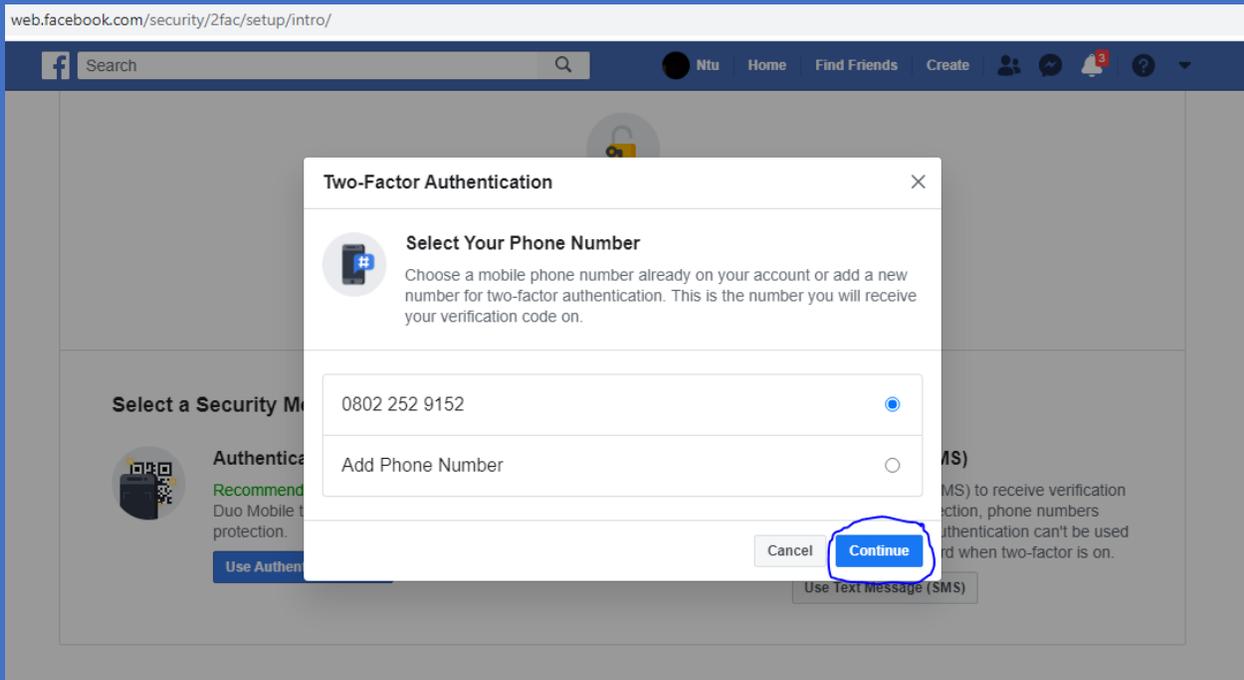

1: Login codes from a third-party authentication app.

2: Text message (SMS) codes on your mobile phone.

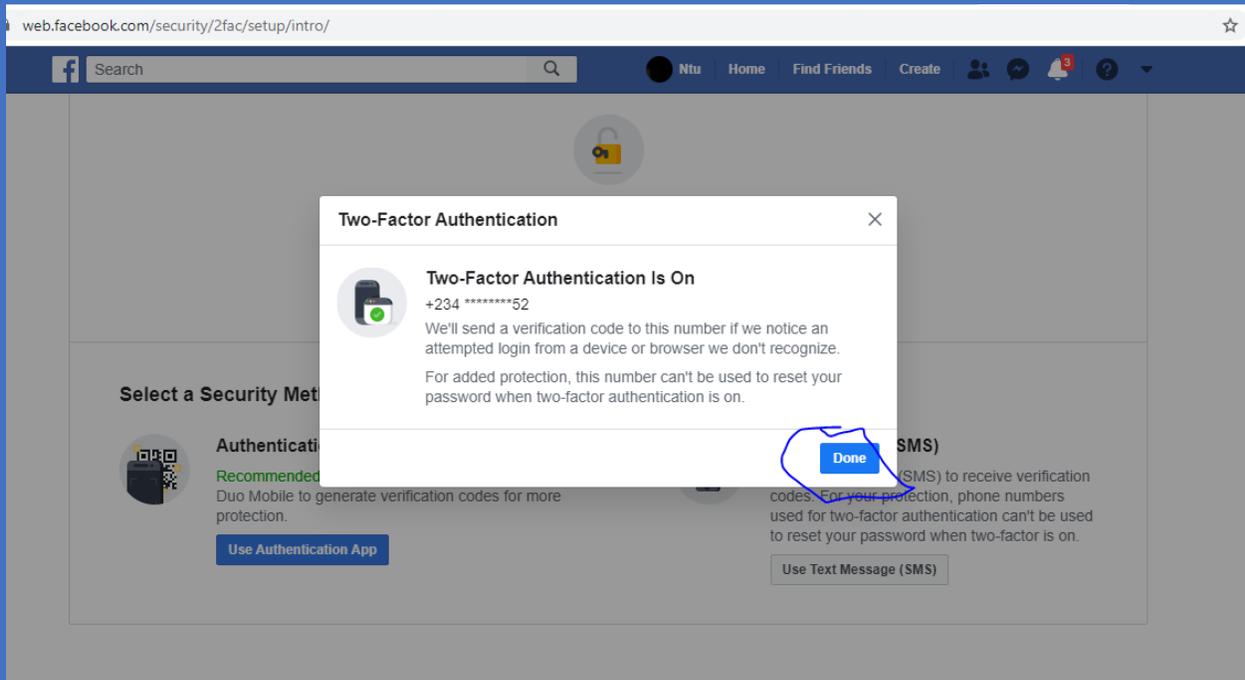

Once you scroll down and click on **USE TWO FACTOR AUTHENTICATION**, Facebook will direct you to a page where you can select between **Authentication App and Text Message (SMS)** I will advice you select Text Authentication (SMS) ***SEE Image Below***

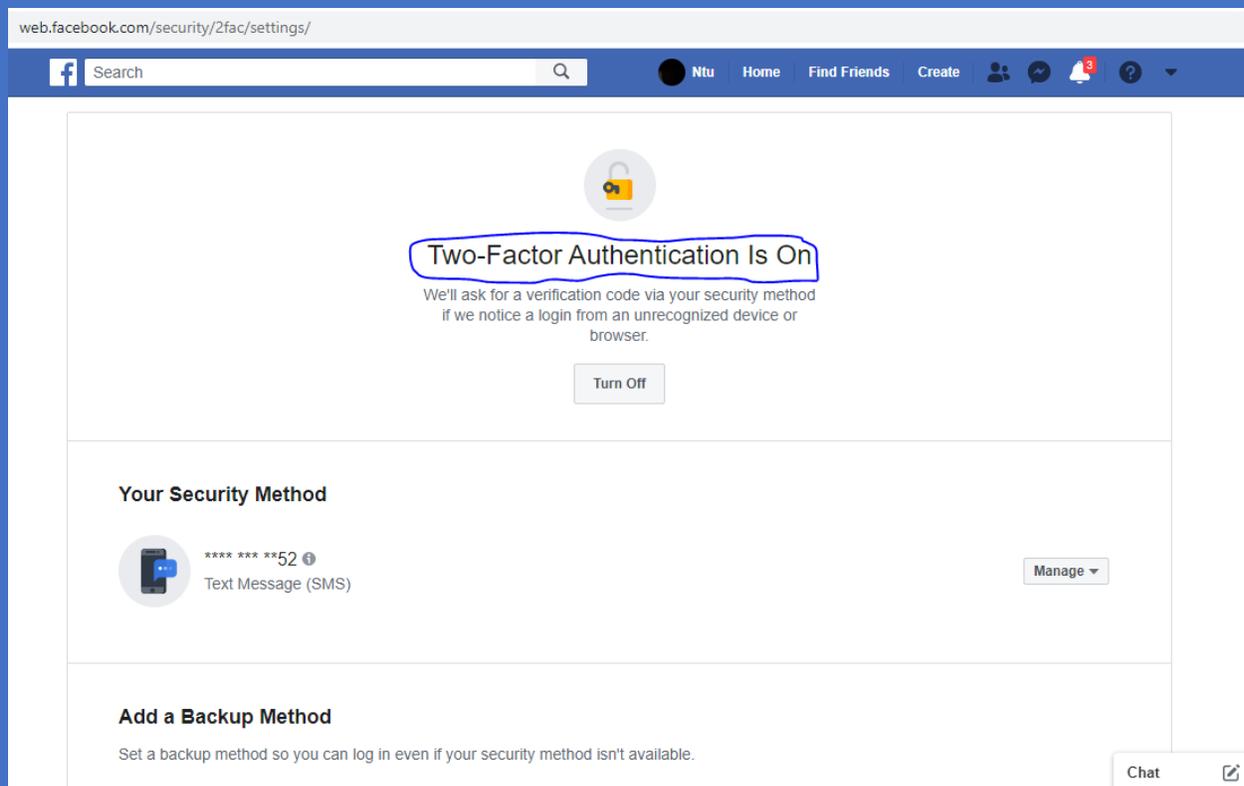

When you select Text Message (SMS) Authentication, Facebook will ask you to add mobile number or best will use the mobile number associated with your Facebook account. *SEE Image Below*

A code will be sent to your mobile number, just enter the code on the next page Facebook Authentication factor will direct you to and Facebook will automatically recognize the code and authenticate you Facebook account provided you entered the right code, *Click on done. SEE Image Below*

Once you click done. That is all, you are good to go *SEE Image Below*

See It! [How To Create A PayPal Account That Send And Receive Money In Nigeria](#)

You can also set your Facebook account to always get alerts when someone tries logging in from a browser or mobile device Facebook doesn't recognize.

You'll need to have at least one of these set up to use two-factor authentication. Once you have added either text message (SMS) codes or a third party authentication app on your account, you'll also be able to set up some of the optional methods below:

- Approving your login attempt from a device Facebook recognizes.
- Using one of your recovery codes.
- Tapping your security key on a compatible device.

If you haven't saved the browser or mobile device you're using, you'll be asked to do so when you turn on two-factor authentication.

This way you won't have to enter a security code when you log in again. Don't click Save this browser if you're using a public computer that other people can access (for example a library computer or a cybercafe public computer).

Facebook needs to be able to remember your computer and browser information so they can recognize it the next time you log in. Some browser features block this.

Should you've turned on private browsing or set up your browser to clear your history every time it closes, you might have to re-enter a code every time you log into your Facebook account from such device computer or mobile

To set up text message (SMS) two-factor authentication, you can either use a mobile number that's already been added to your account or add a new number.
